1) Introduction of Python
2) Keywords
3) Variables
4) Data types
5) IP/OP functions
6) conditional statements
   if - ifelse, conditional if else, elif
   Nested if.
7) Loops. → (for loop, while loop, Nested)
8) * Built in function. * user defined * lambda
9) file handling
10) ERROR and Exceptional handling
11) Data Structure,
   (list, tuple, set, dictionary)

Python libraries for data science

1) Pandas - for data manipulation
2) Numerical python (Numpy) - Numerical calculation
3) matplot's pyplot - visualization
4) Seaborn - visualization.
5) Sci-kit-learn (Sklearn) - machine learning
6) Tensorflow with keras and pytoruch - Deep learning.

* What is Programming?

Programming. It is a process of giving Instructions to the computer to perform specific task called as programming.

Levels of programming

* 0 and 1
* mid assembly level language. (Not user friendly)
* High level language
(C, C++, Python, Java, SQL, etc).

* What is python?

It is a highlevel, Interpreted, object oriented programming, Indent programming language.

* Features of python.

-> Easy to Learn
-> Free and open source
-> Huge community support
-> Vast collection of libraries
-> It support all kind of programming Language.

* Application in python.

-> Web application
-> Gaming application
-> Desktop application.
-> Data Analysis
-> Data science
-> AI' Automation
-> IOT (Internet of things)

Python Evolution:

Python 1 - 1991

Python 2 - 2000

Python 3 - 2008

Developer of python - Guido Vaan Rasum

Feature	Python 1	Python 2	Python 3
Released	1991	2000	2008
Status	Obsolute	No longer supported	Actively supported
Print Syntax	Print "Hello"	Print "Hello"	Print ("Hello")
Text handling	Older Approch	older Approch	(Better unicode support)
Current usage	Historical	Legacy projects	modern projects
